

Contents

Preface	v
Table of Contents	vii
Chapter 1	
Overview	1
1.1 The Next Linear Collider	1
1.2 Experience Base and Performance Goals	3
1.2.1 The Stanford Linear Collider (SLC)	5
1.2.2 The Final Focus Test Beam	5
1.2.3 The Damping Ring at the Accelerator Test Facility (ATF)	5
1.2.4 Accelerator Structure Design and ASSET	6
1.2.5 The NLCTA, X-band Rf Components, and Accelerator Gradients	8
1.3 Construction of the NLC	9
1.4 Work in Progress and Milestones on the Road to the NLC	11
1.5 Outlook	12
Chapter 2	
NLC Parameters and Layout	15
2.1 Introduction	15
2.2 Layout	16
2.2.1 Final Focus and Interaction Regions	16
2.2.2 Main Linacs	17
2.2.3 Injector Systems	18
2.3 Parameters and Luminosity Evolution	19
2.4 Options Beyond the Baseline Design	22
2.4.1 Simultaneous Operation and 180 Hz	22
2.4.2 Alternate Collision Options: gg, e-e-, e-g	23
2.4.3 Positron polarization	23
2.4.4 Use of Extracted Beams	23
2.4.5 Possible Implementations of the FEL Subsystems at the NLC	24
2.5 Route to a Multi-TeV Linear Collider	25
2.5.1 Energy and Accelerating Gradient	25
2.5.2 Luminosity	26
2.5.3 The NLC Configuration and Multi-TeV Options	26
Chapter 3	
Conventional Facilities	29
3.1 Introduction	29
3.2 Sites	30

3.2.1 Site Criteria	30
3.2.2 Illinois North-South	30
3.2.3 California 135	31
3.2.4 Site Development Work	31
3.3 Injectors	32
3.3.1 Central Injectors	32
3.3.2 Remote Injectors	32
3.4 Main Linacs	33
3.4.1 Parallel Deep-Bored Tunnel Configuration	33
3.4.2 Near-Surface Precast Section Configuration	34
3.5 Detectors	34
3.5.1 High and Low Energy Experimental Halls	34
3.5.2 Deep and Near Surface Experimental Halls	35
3.6 Campus	35
3.6.1 Central Campus	35
3.6.2 Distributed Campus	36
Chapter 4	
Rf System Design	37
4.1 Introduction	37
4.1.1 Historical Perspective	37
4.1.2 NLC Rf System Overview	37
4.1.3 Klystrons	41
4.1.4 Modulators	42
4.1.5 Rf Distribution	43
4.1.6 Accelerator Structures	44
4.1.7 Linac Layout	46
4.2 Modulators	47
4.2.1 Introduction	47
4.2.2 Modulator Requirements	48
4.2.3 Solid-State Induction Modulator	48
4.2.3 Development Program	51
4.3 Klystrons and Low-Level Rf	54
4.3.1 Introduction	54
4.3.2 PPM Klystron Development at SLAC	56
4.3.3 Low-level Rf	59
4.4 Rf Distribution	59
4.4.1 Introduction	59
4.4.2 Delay Lines	61
4.4.3 Rectangular-to-Circular Mode Converter	61
4.4.4 Launcher	62
4.4.5 Extractor	64
4.4.6 Tap-offs	65
4.5 Accelerator Structures	66

4.5.1 Introduction	66
4.5.2 Structure Design Considerations	66
4.5.3 Long-Range Wakefield Suppression	67
4.5.4 Structure Fabrication and Testing	70
4.5.5 High Gradient Development	71
Chapter 5	
Injector Systems	79
5.1 Introduction	79
5.2 Injector Layout Choices	79
5.3 Polarized Electron Source	82
5.4 Positron Source	85
5.5 Damping Rings	88
5.5.1 Main Damping Rings	91
5.5.2 Positron Predamping Ring	93
5.5.3 Outstanding issues	93
5.6 Bunch Length Compressors	94
5.7 Polarized Positrons	96
5.8 Present Activities and Future Plans	97
Chapter 6	
The Beam Delivery System	101
6.1 Introduction	101
6.2 Final Focus	102
6.2.1 Correcting the Chromaticity	102
6.2.2 Additional Aberrations	103
6.2.3 Jitter and Emittance Dilution Tolerances	104
6.2.4 FFTB and SLC Experience	108
6.3 Collimation System	111
6.3.1 Collimation System Design	112
6.3.2 Spoiler Design	112
6.4 Layout	116
6.5 LINX	116
Chapter 7	
Beam Dynamics and Performance Studies	121
7.1 Introduction	121
7.1.1 Emittance, Jitter, and the Connection to Accelerator Alignment	121
7.1.2 Sensitivity, Tolerance and Emittance Budgets	123
7.2 Ground Motion	124
7.2.1 Power Spectrum of Ground Motion	124
7.2.2 Integrated Motion of the Ground	125
7.2.3 Diffusive Ground Motion	126

7.2.4 Systematic Ground Motion	127
7.3 Maintaining Collisions at the Nanometer Level.....	127
7.3.1 Beam-Based Steering Feedback	128
7.3.2 Lattice Response and Correlated Motion	129
7.3.3 Motion of the NLC Quadrupoles	129
7.3.4 Motion of the NLC Final Doublet	129
7.3.5 IP Collision Feedback Within One Bunch Train	130
7.4 Emittance Dilution in the Main Linac	130
7.4.1 Beam Breakup Instability (BBU)	131
7.4.2 Other Sources of Emittance Dilution	132
7.4.3 Rf Girder Alignment	135
7.4.4 Quadrupole Alignment	136
7.4.5 Sources of Multibunch Emittance Dilution	140
7.4.6 Summary and Proposed Main Linac Tolerances	141
7.5 Emittance Dilution in the Final Focus	141
7.5.1 Principal Sources of Emittance Dilution	142
7.5.2 Correction of Static Errors	142
7.5.3 Correction of Dynamic Errors	142
7.6 Conclusions	143
Chapter 8	
Gamma-Gamma Interaction	147
8.1 Gamma-Gamma Interaction Region.....	147
8.2 Laser Architecture	147
8.3 Optics and Interaction Region	149
8.4 The Benchmark $\gamma\gamma \rightarrow H \rightarrow b\bar{b}$ mode	150
