Subject: Presentation of Utility and Access Shafts Model

Attendees: Clay Corvin, Eric Doyle, Leif Erikson, Karen Fant, Jon Ives, Mori Munro, Carl Rago, Dave Schultz, Javier Sevilla

Javier presented information on access and utility shafts for NLC. (See References 11/11/99: Access and Utility Shafts Presentation)
His presentation got everyone’s attention as to how many shafts had been planned for the Lehman review and the need to reduce the number of access shafts. There was discussion on definitions of the different types of shafts, what’s routed through the shafts, size of the shafts, number of shafts, how they will be utilized, shielding requirements and safety considerations.

Another meeting will be scheduled to further review the beam delivery and injector area.
