Globalization Working Group

Issues:
- How will the field operate in an internationalized future?
- What new organizational structures are needed?
- How does the U.S. maintain a strong program in this context?

Members:

Webpage: http://ypp.hep.net/ypp_globalization.html
Results from Snowmass (survey and straw polls):

- Relative unawareness of international groups studying the future of the field and the impact of even higher internationalization among young physicists (YP). Need for (self-) education.
- For the organization of the one next international energy-frontier project YP favor a "very large shared project" as structure.
- Issue of "regional centers" needs further exploration and discussion.
